-ACGIH Time Weighted Average Exposure Limit (TWA): 5 mg/m³

VENTILATION SYSTEM: A system of local and/or general exhaust is recommended to keep employee exposures below the Airborne Exposure Limits. Local exhaust ventilation is generally preferred because it can control the emissions of the contaminant at its source, preventing dispersion of it into the general work area. Please refer to the ACGIH document, *Industrial Ventilation, A Manual of Recommended Practices*, most recent edition, for details.

PERSONAL RESPIRATORS (NIOSH APPROVED): If the exposure limit is exceeded, a particulate filter respirator (NIOSH type N95) may be worn.

RESPIRATORY PROTECTION: Airborne concentrations should be kept to lowest levels possible. If dust is generated and the occupational exposure limit of the product is exceeded a particulate filter respirator
